Photo Courtesy of Khan Academy If Salman Khan has anything to do with it, within five years everyone will be educated online - for free. As he announces this, the 35-year-old former hedge fund manager sits at the Dana Street Roasting Company, just around the corner from khan academy headquarters in Mountain View, California. Khan's plan, unlike space, is not modest. the founder of perhaps the most popular education website in the world right now (khanacademy.org) wants to build the schools of the future. His work began as a series of YouTube videos Khan made for his cousins in 2006 to help them in math. He soon began to expand the scope of his videos, and before long students were using them. By early 2009 Khan had quit his job at Wohl Capital Management and set up the nonprofit academy, which has received the Gates Foundation and the O'Sullivan Foundation. Khan's free online course list is now drawing 3.5 million unique viewers a month. He has hired additional faculty members to make videos for the academy's latest venture: a program for bricks-and-mortar schools, which students can use the software for the first 20 minutes of class before a live teacher takes over, allowing students to proceed at their own pace. Fighting a one-size-fits-all ethos is key to Khan's philosophy. In his usual jeans and sneakers, Khan could easily be seen as a student at nearby Stanford. But the MIT graduate believes the college has evolved into a simple certification system. Colleges sell students on the idea that it's the best investment, he says. But it's a one As hundreds of thousands of graduates find themselves unable to find work, Khan has joined a growing number of skeptics, whose ranks include both Occupy Wall Street protesters and PayPal founder Peter Thiel. College costs the same amount of money as a home in most parts of the country, says Khan. Except that in the end you don't have a home. He believes that the college education of the future will be based more on activity than on institutions. Instead of appearing in lectures for hours every day, he says, you're going to build things, do research. The curriculum will be increased by a circuit of academics in the Khan Academy area, and students will interact in self-shaping online communities. Under this system, he says, children will know about more things, be off-the-charts productive, and earn twice the salary. But his utopia is still a few years away. After all, traditional credentials still count for something. As Khan notes, Bill Gates and Mark Zuckerberg may have left Harvard, but everyone still knows they're in. Feature image credit: Wikimedia Commons What is Khan SAT prep academy? Khan Academy is an online education nonprofit founded by Salman Khan in 2006. Khan Academy offers thousands of free videos covering a variety of topics, including math, economics, and science. Anyone can sign up for a free account and have access to all the videos offered by Khan Academy. Videos usually consist of example problems and notes handwritten by an off-screen narrator (usually Khan himself). In 2015, Khan Academy and the College Board (the company that designs and manages the SAT, PSAT and AP exams) collaborated provide free SAT study tools on which this guide will focus. (Since the College Board does not manage the ACT, Khan Academy does not offer materials directly geared toward ACT preparation.) Why is Khan Academy and the College Board offering these resources for free? Both the Khan Academy and the College Board are nonprofit organizations. This means that their goal is to provide a benefit to others, not to make a profit. Instead, they use their excess revenue to mission or target. Khan Academy says their mission is to provide a free, world-class education for anyone, anywhere. Multiple studies have shown that students from richer backgrounds tend to perform better in SAT than students from less wealthy families. The College Board wants your sat rating to be based on how intelligent you are, not how rich your parents are. As a way to try and solve this problem, we worked with Khan Academy, which offers all its courses for free so that students from all financial backgrounds have access to the exact same material. This is part of the college board's larger rebranding of the SAT, which also included many major changes to exams. All Han Academy resources are offered free of charge. What SAT Prep Resources Does Khan Academy Offer? As mentioned above, as a result of its collaboration with the College Board, Khan Academy offers official study material for the SAT (which can also be used to prepare for psat). These resources include video lessons, full-time practice tests, quizzes, personalized practice recommendations, sample questions, and more. We will explore each of them in more detail below. Quiz After you create your account, one of the first things you will be asked to do is take a diagnostic quiz so that Khan Academy can determine your strengths and weaknesses in each SAT module. Eight short quizzes are available: two for reading, two for writing and language, and four for math. After you complete each quiz, you'll be able to check your answers and see how to solve each problem. You will then be given personalized recommendations based on your score. There are four different skill levels that you can place yourself on for each SAT topic. If you answered multiple questions incorrectly, you'll start at a lower skill level and work your way into more complex questions. Many times you will start at different skill levels for different topics within a section. For example, if you took a quiz on Mathematics, based on your answers, you could start at skill level 2 for cycle theorems, linear equation word problems, and complex numbers, and you could start at skill level 3 for linear equation graphs, quantity isolation, and radical and rational equations. Your skill level in each area will give you personalized practice recommendations, which we cover below. Personalized practice suggestions we just mentioned, your scores in the eight quizzes will determine your personalized practice suggestions. For example, if you generally rate well in the Reading section, but have difficulty analyzing scientific excerpts, you'll be directed to practice questions and videos that focus primarily on scientific excerpts. These recommendations make it easier to spend your time effectively, because you focus on focusing on concepts that need to work and not waste your time going over topics you already understand. Video Lessons Video courses are the hallmark of Khan Academy, and dozens of them are available covering each of the three SAT sections: Reading, Writing and Language, and Math. Khan Academy SAT videos are usually 2-10 minutes long, and include presenting an example problem and analyzing exactly how to answer it. Video reading covers each of the four types of text passages contained in the SAT. Mathematics includes videos about algebra, data analysis and many other subjects. Many themes have videos that are barely organized, so you can start by watching a video with easier examples and work up to more difficult problems. Khan Academy video lessons can help you better understand difficult topics. Practical Questions There are thousands of practical SAT questions available for Khan Academy. Each of the topics tested in SAT has video and practice questions related to it, so after watching a video in a particular sense, such as syntax or linear word problems equation, you can try a few questions on this topic to see how well you understand it. After you answer a problem, you'll immediately find out if you got it right or wrong, and an explanation will appear for each answer option that explains why that choice was right or wrong. Full-Length Practice Trials Khan Academy also offers four full-length practice tests (the same practice test that the College Board offers on its website) that users can take either online or with pencil and paper. You can get these tests all the way through as you would on Test Day, or you can stop after each section and review your responses. Like quizzes and practice problems, each question includes a full explanation of why each answer option is right or wrong. Summary: Khan Academy's Test Prep Resources To recap, Khan Academy's resource testing prep include: Diagnostic quizzes to help you understand how strong you are on each topic before you start studying. Personalized practice suggestions so you can focus on learning the hardware you need to improve. Video tutorials to clarify topics you don't understand right away. Numerous practice questions to help enhance your skills. Complete practice tests to get you used to the real SAT. How is Khan Academy different from the official SAT Study Guide? How do Khan Academy SAT preparation materials differ from the Official SAT Study Guide? The official SAT study guide is a 792-page book produced by the college board that includes practice questions and information about SAT SAT how to study for it. To get started, one way in which these resources are similar is that they are both produced in collaboration with the College Board. This makes them high-quality resources because you can be sure they give an accurate representation of the SAT. Both also offer the same four full-length practice tests, as well as additional questions, explanations and tips to help you understand the test. However, overall, the information of the Khan Academy is more thorough. Advantages of Khan Academy Because Khan Academy video tutorials guide you through every step of solving a problem, they offer you a different way to study and learn new concepts if you feel you haven't understood a topic as much as you want to just read an explanation of it from a book. In addition, while both resources offer practice questions that are broken down by specific categories within a department, only Khan Academy helps you determine which of these areas you are weakest in, so you need to practice more. Other advantages of Khan Academy include the fact that full-length practice tests are timed to be more realistic, and that Khan Academy automatically grades your responses to tests, quizzes, and practice problems, which saves you the time of scoring yourself. Khan Academy also offers far more practice problems than the Official SAT Study Guide does. Advantages of the Official SAT Study Guide Basically all information offered by the Official SAT Study Guide, both practice tests and additional advice, is available free of charge either at Khan Academy or on the College Board website. The main advantage of the Official SAT Study Guide is that its practice tests have already been printed for you. Taking the tests with pencil and paper will help you get a more accurate representation of your score by taking the test online, since you need to take the actual SAT on paper. While Khan Academy offers the ability to print from exams, printing out four exams that are 70 or so pages each uses a lot of paper and ink, so having the tests already printed can be helpful. The book is currently available for about \$15 on Amazon, so if that's a big enough incentive for you, you may want to consider buying it. Which resource should you use? If you use Khan Academy, you will be using all the prep material The Official SAT Study Guide offers and then some, since Khan Academy offers video courses, personalized study recommendations, and many more practice questions. Students who appreciate having problems really for those or those who are not sure which areas of SAT to study can benefit particularly from Khan Academy. If you prefer to have your practice tests already printed out for you, the official SAT study guide can be a useful resource for you, but don't expect it to offer many other advantages since almost all of its hardware is available for free elsewhere. Conclusion Khan Academy is an organization that has worked with College Board Board provide free online resources for SAT. These offers include quizzes, practice questions, full-time practice tests, video lessons, and personalized recommendations, so you can focus your studies on the topics you need to improve on the most. While both Khan Academy and the official SAT Study Guide are produced in collaboration with the College Board and contain practice tests, Khan Academy is unique in that it offers video courses and personalized study recommendations. Because they are quite new, Khan Academy materials are a bit limited, but they can still be a good source if you use them along with other preparation materials. What's next?
